

Ladybugs

Ladybugs are red and black on their backs. When ladybugs grow up they have a lot of dots on their backs.

The seven spotted ladybug is native to part of western Europe and has been introduced into much of North America. Lady bugs eat grass and eat plants and bad bugs. Ladybugs are known as ladybeetles.

Ladybugs have 6 legs and when you pick them up they fly away. Ladybugs life cycle is only 4 to 8 weeks!
