

# Bees

Bees have yellow and black stripes on their bodies . Bees have antennas and wings . Bees have round bodies .

Honeybees live in a nest called a hive. A bees hive can hold up to 80,000 bees . Bees can live in your house and a lot of places like in trees.

Bees eat nectar and pollen. Bees take the nectar and pollen and take it to their hives and make honey. Bees like to eat sweet things which is why you will see them hovering around candy and spilled beverages.

First , the queen lays an egg in a wax cell . Next , the bee worker feeds the hatched larva . Then larva reaches full growth . Later the bee worker seals thre cell . After that, larva becomes a pupa . Last , adult bee leaves cell .

Bumble bees can only sting someone once. Did you know a honeybee is not born knowing how to make honey? Did you know the younger bees are taught by more experienced ones?
