

# Cricket

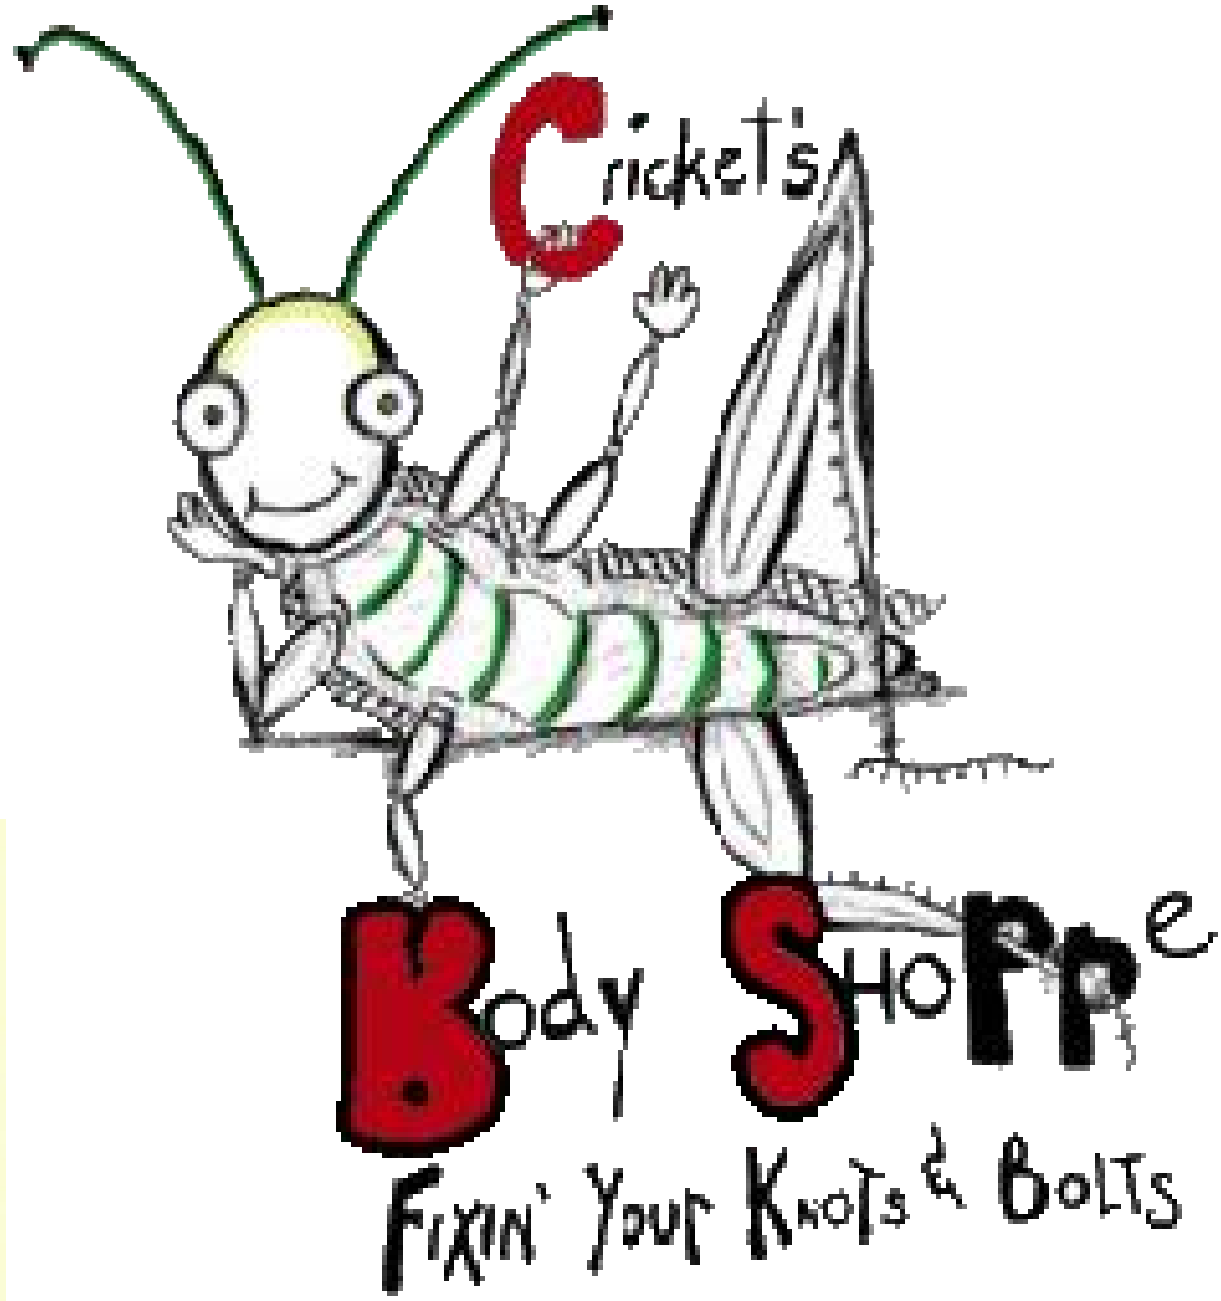

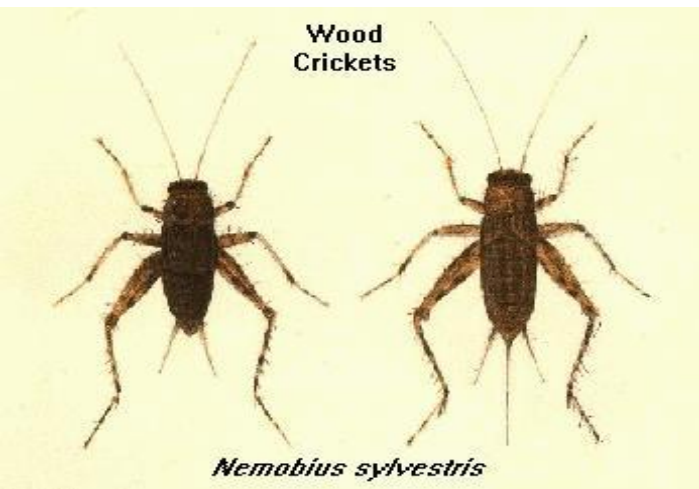

**Crickets have 6 legs and 3 body parts. And they hop and crickets have red eyes.**

**A cricket lives in a school. They live in houses. They live outside.**

Crickets eat food from the ground. They eat crackers. Eat paper.

Crickets hatch out of an egg then they eat the egg. Then they look like a tiny adult. Then they turn bigger.

Crickets live in the grass. And they hop. And they hop high. And they hop.
