

The name of this insect is praying mantis. They have spiky claws. And have a long back. Some are brown.

By Miguel!

Praying
Mantis

Some live in forests. Some live where there are bugs to eat. Some live in the gardens.

It eats crickets. It eats bees. It eats moths.

First its born. Then it becomes in to a kid. After that it's a big praying mantis.

It looks like its praying. It has a long neck. It has a nose.
