

FIREFLY

It's body looks like an oval.

It's wings are black and yellow.

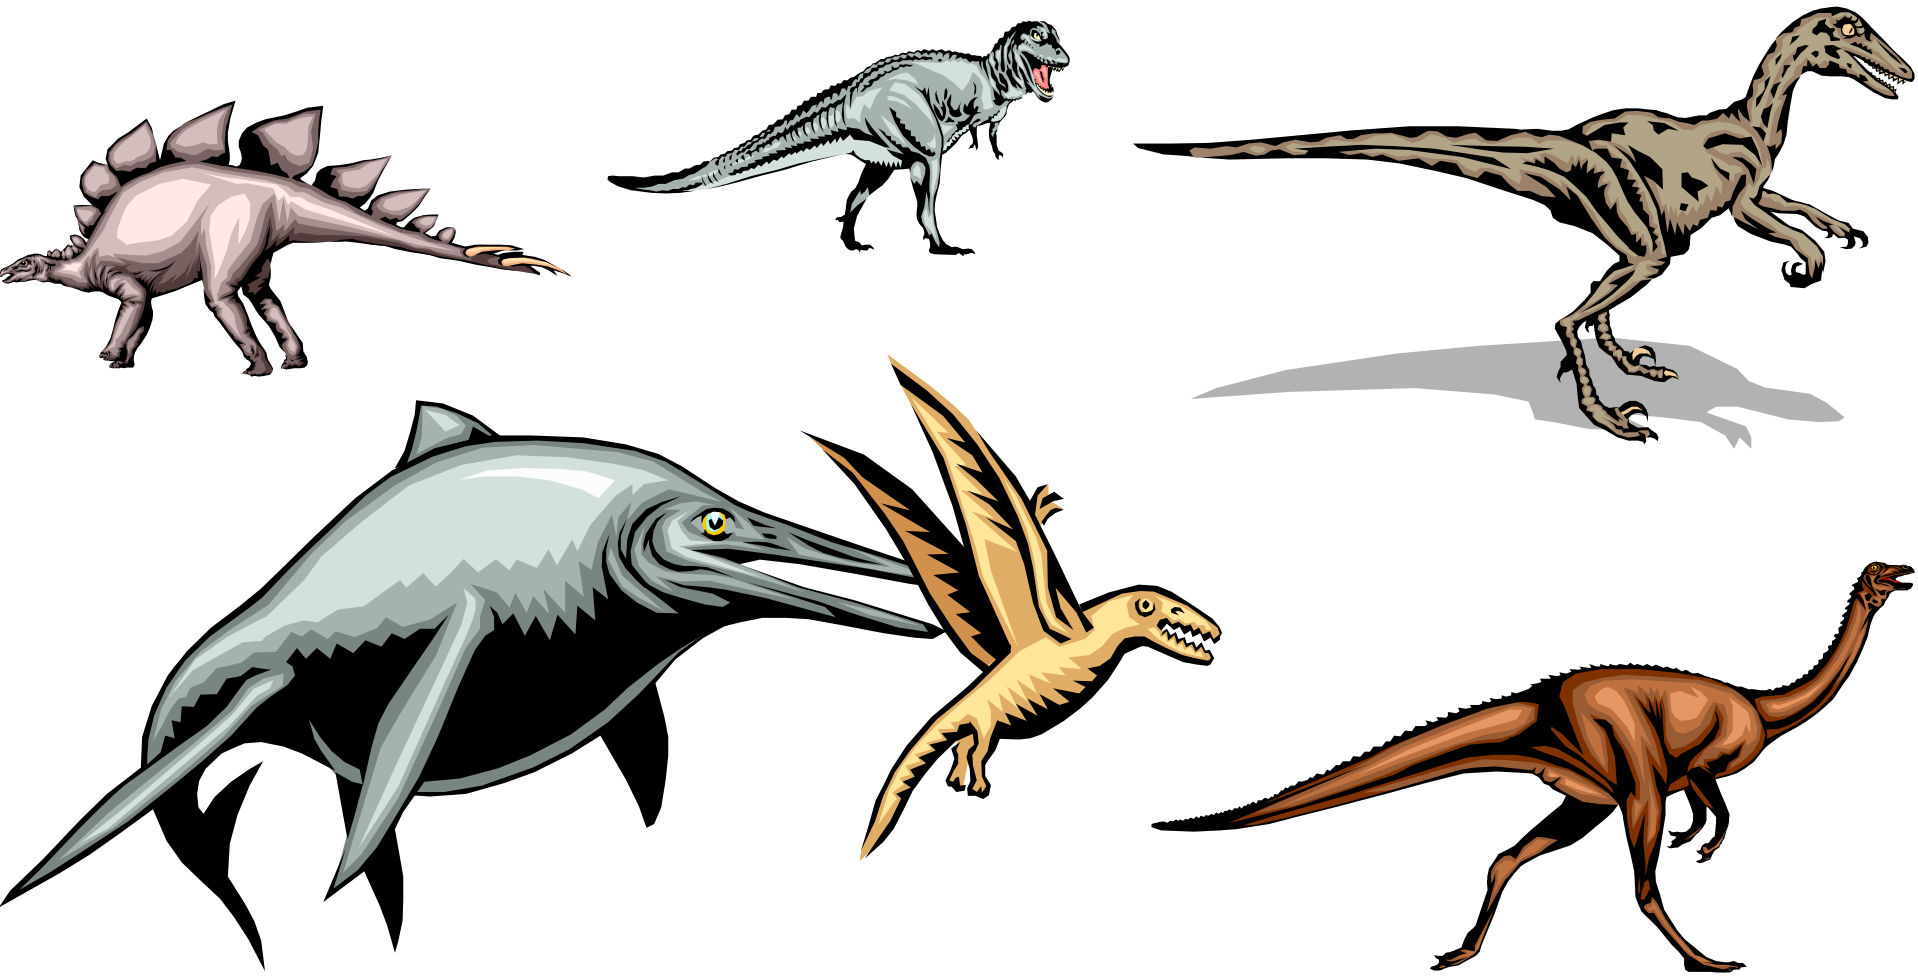

It's head is black, yellow and red.

They eat meat. It eats other insects. They are meat eaters.

When it opens it's wings it lights up. Its wings light under it. Some people think it lives in fire.

It lives in USA. The firefly live in rotting wood. That insect lives in the woods.

It has to find it's food. It is really hard to be one. It gets eaten.
