

Green sea turtle

**This reptile is 30 inches long.
The green sea turtle has greenish to a brownish shell. It has tiny spots. The spots are yellow and brown.**

Its normally found in the ocean of North America. It is also found in Hawaii, aquariums, Sea world and Oceans. I've been to Hawaii.

The green sea turtle eats plankton and sea weed. They swallow it in hole. They also think they eat other things.

It lays its eggs on shore. So digs deep holes. And its sad because people eat the eggs.
