

# Tiger Snake

This reptile is many different sizes. A tiger snake can be brown, yellow, orange and many different colors. I think its awesome. A lot are striped and some are just plain.

They live in Australia's wildlife.  
They live in dead trees, that are  
low on the ground.

Their favorite foods are frogs. But if there forced to eat mice they will. The tiger snake also eats lizards, fish and other small snakes.

All snakes can eat stuff bigger than their head. All they do is disconnect their jaws. That is so cool.
