

The Creepy Black Widow

I studied Black Widows. I think they are creepy because they are the size of a paper clip. They kill animals and eat their counterparts. A Black Widow is very venomous. The marking on their back looks like an hour glass.

A female Black Widow lays hundred of eggs. They also have fangs! A Widows bite is reportedly 15 times more venomous than a Rattlesnakes. They eat flies, mosquitoes, grasshoppers, beetles and caterpillars! They also spin huge webs that is why I think they're creepy!
