

Hammer Head Shark

by Jade and Jasmine

They have oddly shaped heads to improve their ability to find prey. Their heads can more thoroughly scan the ocean for food. It can grow up to 20 feet long. The diet is a carnivore and it eats fish. It weighs up to 1000 pounds.

Hammer Head Shark

It is found in temperate and tropical waters worldwide far offshore. Some hammer heads are often seen in mass summer migrations seeking cooler water. Most Hammer head species are fairly small and are considered harmless to humans.
