

TIGER SHARKS

I studied Tiger Sharks and I think they are the creepiest creatures that I have ever read about. I think they are creepy because they can eat people. They are cool because while the sharks are maturing their stripes begin to fade. I think they are cool because they can grow to be 20 to 25 feet long or 6 to 7.5 meters long. The only place Tiger Sharks live is in tropical water. Tiger Sharks are good for the earth because they eat trash that humans throw in the water. By Hunter
