

Killer Bees

by Abby and Hayden

Killer bees produce less honey and wax than honey bees. Killer bees swarm more than regular bees. Killer bees hate high pitched sounds. African bees came to Brazil in 1956.

They have been known to attack animals or people. Africanized honey bees are killer bees and stay angry longer. More than 1,000 people have died from Killer Bees. If one killer bee sting's it releases a

If one killer bee stings it releases an alarm that smells like bananas. It incites other bees to sting. Victims who are stung but do not die hurt really bad.
