

# **Tarantula Wasps by Abby and Selena**

Tarantula Wasps grow as long as 50 millimeters . Tarantulas are among the largest wasps found in the world. At the end of their legs there is a hook like claws that they use to grapple onto victims. The Tarantula Wasps wings are brightly coloured so it warns people and predators.

Once the wasp egg hatches into larva, the larva chews a hole into the spider's abdomen.

if provoked they will sting. their sting is the most painful sting in the hole world. the sting

immediate excruciating with the victim unable

to do nothing but scream in pain for three min.!

tarantula wasps eat huge caterpillars!

They hunt for tarantulas that are used as food for the baby's.
