

Creepy Creature

I studied a black mamba snake I think it is the most creepiest creature ever because it is fast, it is venomous and it has a black and white stripe Mohawk on top of its head.

Black mambas have been blamed for nervous human beings . They are getting their names from the inside of there mouths!

A black mamba has a very black sharp tooth.
Black mambas live in the savannas and rocky hills of southern Africa. It is Africa's longest venomous snake. It can be up to 14 feet long.

That's why I think black Mambas are soooooo
CREEPY!!!
