

Tiger sharks by ayden

Tiger sharks are named for the dark vertical stripes found mainly on juveniles. As these sharks mature, the lines begin to fade and almost disappear. These large blunt nosed predators have earned their reputation as man eaters. They are second only to great white sharks in attacking people. They are scavengers, with excellent senses of sight and smell and are very big.

tiger sharks

There age goes to 50 years and they are a size of a man. They have sharp highly serrated teeth and powerful jaws. Their weight is to 850 to 1,400 pounds. There group name is school or shoal.
