

Creepy creature

I studied a tiger shark. I think it is creepy because they are man eater's. They are carnivore's and sometimes eat people. They can grow 20 to 25 feet long. They have powerful jaws. They are second only to great white shark's in attacking people. They can live to 50 years. They can weigh more than 900 pounds. They can eat sting rays, sea snakes, seals and birds.
