

Grizzly Bear

I studied the Grizzly bear and I think it is the creepiest creature on Earth. I think it is creepy because it can run up to 30 miles an hour. It can eat almost anything. They also have super long claws. Grizzlies are about eight feet long.

By Windell

They can be dangerous to humans especially if surprised or if humans come between a mother bear and her cubs. They hibernate during the winter and eat nothing. They are also born in winter. These are all reasons why I think the Grizzly bear is creepy.
