

# The blue fire ant

The blue fire ant can jump 50 feet and it can run 10000000000000002 miles per hour. It lives in Alaska in a igloo ant hole. One day someone covered his ant hole with snow. I picked up the snow with my hands and uncovered his ant hole.

Then the Blue Fire Ant got some food he went back to his ant hole. Then he ate the food then he got a drink from puddle.
