

# STICK BUGS

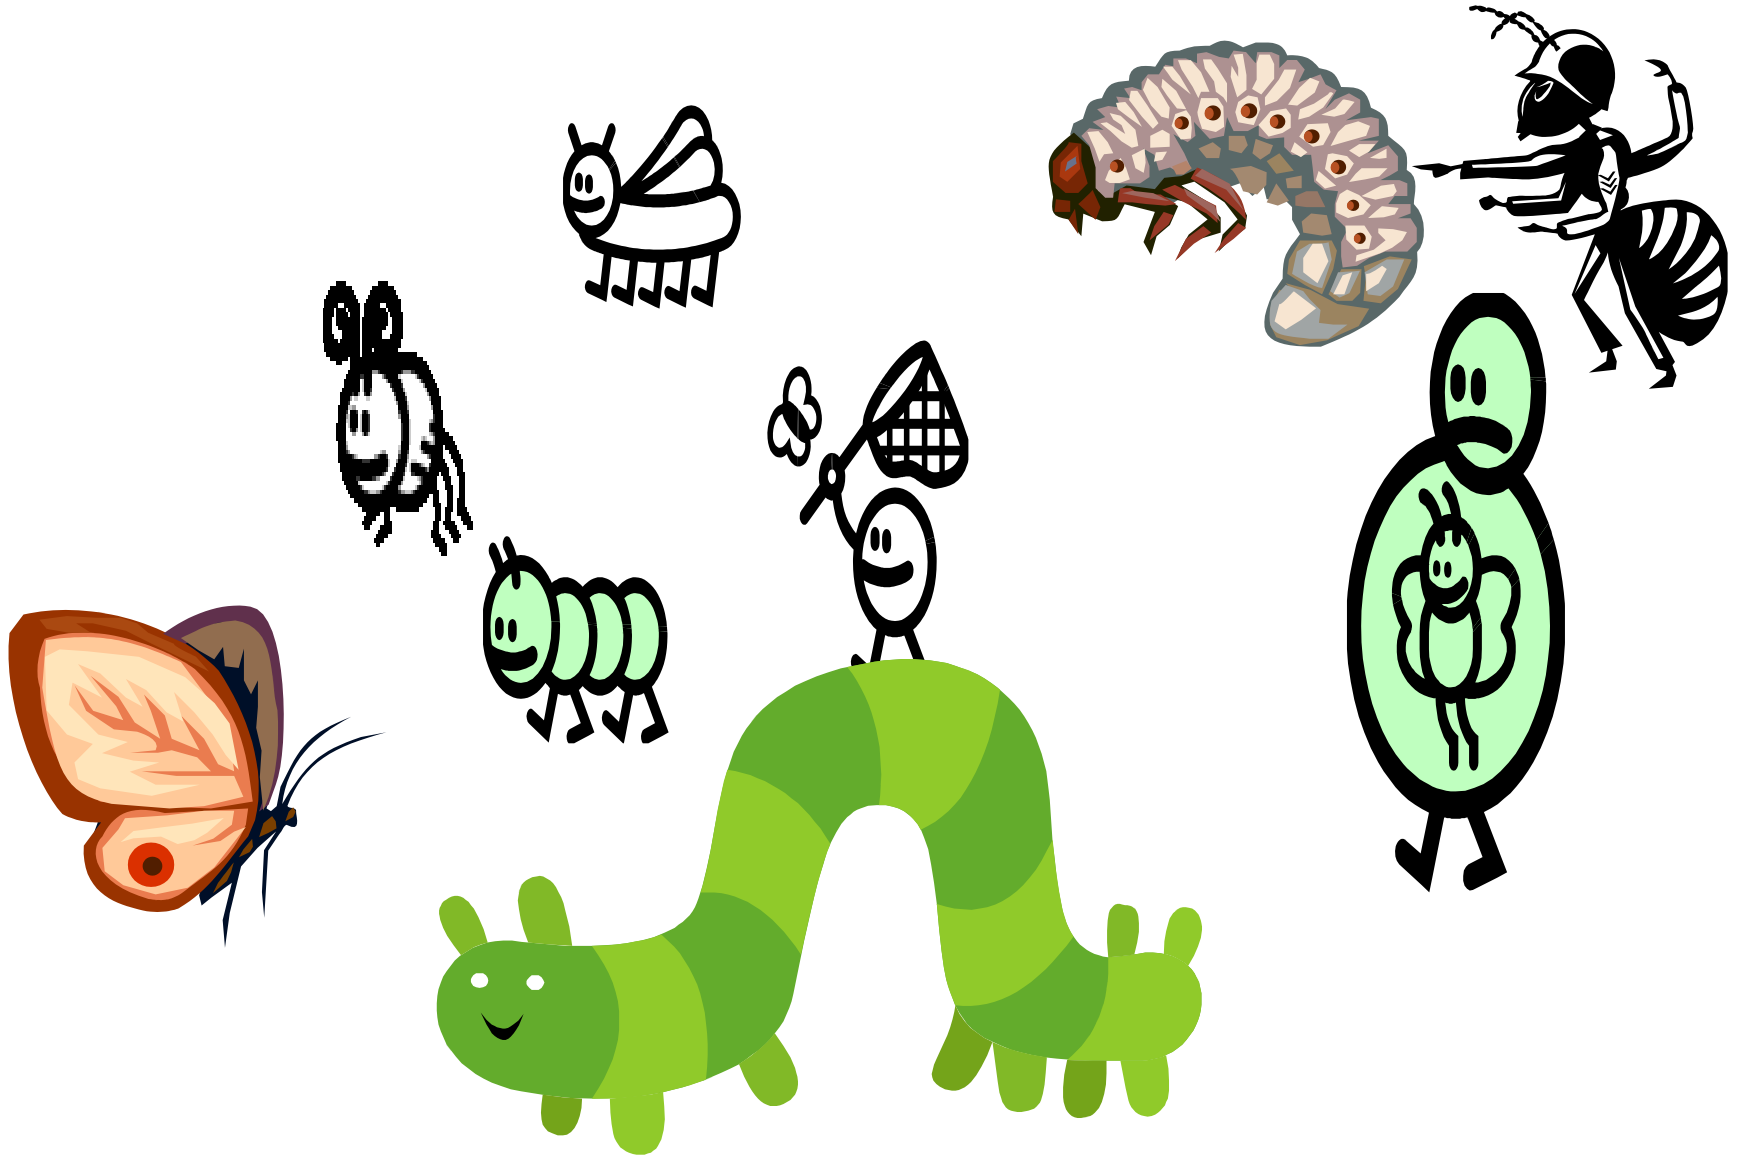

As its suggests, the stick bug resembles the twigs among which it lives, providing it with one of the most efficient natural camouflages on Earth. It and the equally inconspicuous leaf insect comprise the plasmas order of witch there are approximately 3,000 species.

Stick bugs live on leafs. And twigs and  
Sticks too.

Stick bugs eat leafs. Flowers. And wood.

The stick bug has legs. He has a stick body. He has eyes. The end
