

# Creepy Creatures

## Polar Bears

*I studied polar bears and they are a creepy creature. I think it's a creepy creature because it eats seals with its sharp teeth. They also have very sharp claws. Scientists think that polar bears just eat whatever they see if they are really hungry. The polar bears eat fish too. They like to eat dead animals like deer. Polar bears are carnivores, they look nice but they are mean. Polar bears can stay alive from 25 to 30 years. Polar bears are dangerous. Polar bears live in the north pole and other cold places. They have cubs and when the cubs get bigger they will be just like their mother.*
