

Swallowtail butterfly

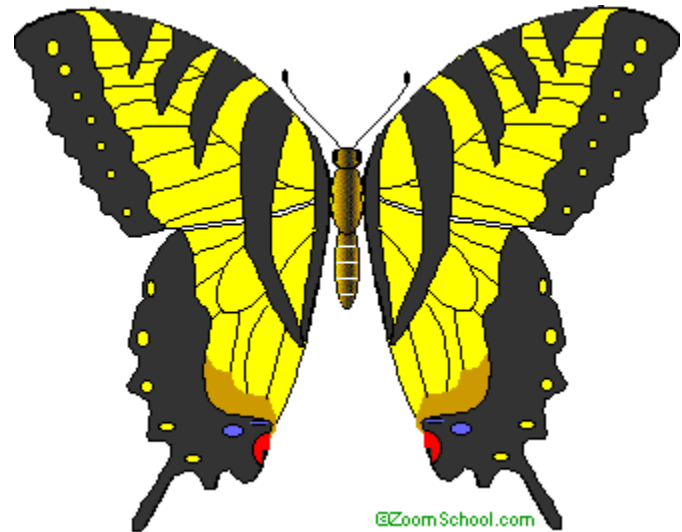

My butterfly has beautiful colors on its wings. When the butterfly closes its wings it will show brown, tan, and yellow. Butterflies have antennae.

The Swallowtail lives in north America. It also lives in Canada and Mexico. I bet it is very pretty.

As a caterpillar , it is very picky eater it will usually eat wild cherry or tulip trees. As an adult it will drink nectar. I bet it is very yummy.

It will go through four stages. Egg, caterpillar, cocoon, and adult. The egg hatches and then it is a caterpillar next it is a cocoon and then it is an adult. This is my bug story.
