

Wolf Spider by Adrian

I studied the wolf spider and I think it is creepiest creature on the earth because some wolf spiders are covered with hair. Also, their fat bodies are brown or gray and there more then 2,000 kinds of Wolf Spiders. They also are .08 to 1.6 inches long and they are mostly found in Paris.

*Latrodectus
tredecimguttatus*

Wolf Spiders catch their prey at night. If you are quiet you can hear the spiders crunch. They lay large sacs of eggs until they hatch. They do not spin webs . That is why wolf spiders are cool.
